

GOHARET SINAI – Sapphire (Slow drying)

Product Overview

The Sapphire Goharet Sinai is a white gypsum plaster. The slow-drying nature of the Sapphire Goharet Sinai allows for a well-managed output of elements as the setting time is elongated to accommodate jobs which require a slower pace of drying as to cover more grounds. The Sapphire Goharet Sinai has great workability and ease of application, reduced shrinkage or cracking, and allows for a reduced time of construction with a polished, superior finish.

Typical Applications

The Sapphire Goharet Sinai is commonly used for the creation of decorative architectural elements through casting in setting moulds. Gypsum elements can then be mounted using a plaster mixture where needed (on ceilings, walls, entrances, etc) for the desired outcome. It is also ideal for usage in the antiquities industry for the creation of statues, art, and related forms.

Setting Time

The standard slow-drying setting times for the Sapphire Goharet Sinai are as follows:

- Initial Setting time: 12 to 15 min
- Final setting time: 23 to 29 min

However, the setting time for our slow-drying gypsum plaster is customisable to perfectly meet your construction needs. Contact us for more information on determining the setting time for your gypsum plaster preferences.
